

AutoFORM LaserNet

New! AutoFORM LaserNet 6.5

3rd April 2009

AutoFORM LaserNet Output Management version 6.5 offers a multitude of improved features. Multi-threaded faster processing, 64 bit support, multiple developer management together with significant improvements to stability and productivity makes this version the most powerful output management suite yet.

What is new in AutoFORM LaserNet 6.5?

Multi-threaded Server Processing

Several enhancements have been made to the LaserNet Server to provide faster processing of documents and information.

Enhanced Windows OS Support

Supporting 32 and 64 bit Windows XP, Windows 2003, Windows Vista and Windows 2008.

Multiple Developers

Now more than one person can work on the same project in LaserNet Developer. File locking is added as a new feature.

GUI Enhancements

Forms and modules setup within grids and new sorting and grouping features added.

New internal configuration format

All configuration files now saved as XML-files (JavaScript files as text).

Dual LaserNet version installations

LaserNet v6.5 can co-exist with previous versions of LaserNet v6.2 on the same system.

PDF Conversion

Enhanced settings for Multi-language support, Security, Image Compression and Document Information.

PDF/A

PDF/A is an ISO Standard for using PDF format for the long-term archiving of electronic documents

Digitally signed PDF

Digitally signed PDF documents is now supported using any valid certificate installed on the system

LaserNet Fax

A new output port, which supports the use of Microsoft shared fax. Using this module with a Windows supported fax card enables you to use the fax software included with the Windows Server.

PDM Archive Module

Integrated PDM Archive Connection support for directly archiving of files via PDF Archive Module.

Microsoft Message Queue (MSMQ)

New input- and output modules supporting Microsoft Message Queue. MSMQ is a messaging protocol that allows applications running on disparate servers to communicate in a failsafe manner.

FTPs and HTTPs

Support for Transport Layer Security (TLS) in FTP, HTTP and Web Server modules

XML Merge

A new module which can merge XML documents into one file

XPS support

Support for the Microsoft XPS document format

SmartXSF for SAP support (Modifier)

Converting Smart Forms XSF file for SAP to XML.

Text to EMF support (Modifier)

Converting Text- and RTF files to EMF (enhanced meta file).

Enhanced Job Destinations support

Setting up user defined Job Destinations, for successfully or failed jobs, for output modules
